Objective

To explore and select a creative, non-digital solution that helps Pierre maintain proper hydration before, during, and after his runs, based on the insights gathered in previous phases.

Ideation Session Summary

A 20-minute brainstorming session was held with three participants. Each round introduced playful constraints (e.g., If Pierre was blind, if he was 5 years old, if he had 5 arms, etc.). Participants wrote ideas on sticky notes and later voted using three stickers each. The most voted idea was selected for prototyping.

Brainstorm Themes

Theme	Example Idea	Goal
Timing	Elastic Wrist-Band with color zones for sip intervals	Encourage regular hydration rhythm
Preparation	Pre-race hydration checklist printed on bottle	Guid Pierre before race
Accessibility	Clip-on mini flask for belt	Simplify mid-race access
Motivation	Buddy reminder signal between friends	Create social hydration cues
Learning	Paper hydration log	Reinforce habit tracking

Chosen Idea / The Hydration Band

A color-coded elastic wristband that guides Pierre’s hydration timing and quantity before, during, and after a run. Each color section represents a hydration checkpoint, prompting small sips at regular intervals without any digital tool.

How It Works

Before the Race (Blue section): Drink one small glass of water 30 minutes before starting.

During the Race (Yellow & Orange sections): Each color corresponds to roughly 20 minutes of running; take small sips when noticing a new color.

After the Race (Green section): Reminds Pierre to rehydrate gradually over 30 minutes.

Design Details

Feature	Description
Material	Sweatproof elastic band with 4–5 color segments
Colors	Blue / Yellow / Orange / Green (hydration phases)
Size	Adjustable wrist fit, reusable
Add on	Optional printed hydration timing guide for training

Why It Works

- Non-digital, based on simple visual and tactile cues.
- Integrates naturally into Pierre’s routine – the wristband is always visible.
- Solves key problems of timing, comfort, and forgetfulness.
- Encourages awareness and control without disrupting performance.

Next Step / Prototyping

The next phase will visualize this idea through a 6–12 frame storyboard showing Pierre’s interaction with the Hydration Band before, during, and after his race. Each drawing will represent one action and emotion along the experience.
